Jack, Not sure how close of attention you paid to water levels and temps up north, but it has been a hot and dry summer in Potter and Tioga counties. i doubt fish did well at all and i think someone even posted pictures of the fish kill on Pine that resulted from the conditions. i know these were stocked fish below Galeton, but they still are reflective of the conditions we saw up here. I spent a great deal of time at work in the east fork of sinnemahoning and it struggled with water most of the summer.

That being said glad to hear you did well on Cross Fork, i don't get to fish it much since i moved to Wellsboro.
