generally i use a good quality tippet on my dry rigs and streamer rigs but for nymphing i have been known to take a single piece of whichever fluorocarbon i used on my spinning reel that year and use that as the whole leader . this only works for nymphs for me as otherwise you don't have the ability to turn over a fly . i do use megathin for the butt to middle of my leaders but stick with a quality tippet there really is no substitute in strenght to thickness
