As coyote become part of Pennsylvania's natural landscape, Pennsylvanians are interacting with coyote, and sometimes for the first time. Unfortunately, there is very little research on coyote in PA, and even less on the coyote-human relationship in PA. Therefore, the purpose of this survey is to fill some of those gaps with the knowledge and opinions of people from the NW PA region. We are specifically looking at the northwestern Pennsylvania area, but are more than happy to collect data from anyone in western PA. We are hoping to get an overview of potential coyote population, hunting methods, coyote behavior towards humans, peoples' opinions and knowledge of coyote, and other general coyote-human interactions in NW PA to help fill the research gap.

You do not have to be a hunter of coyote to take this survey. Please feel free to pass it along to your family and friends. Everyone's opinion is important.

Thank you for your time!!
