It is 4350 miles from Idaho Falls to York, PA where I live and I was figuring no matter what vehicle you choose to take as the tow vehicle it is very doubtful anyone will be getting more than 20 mpg. So figure at least \$3.50 p/gallon X 217.5 gallons = \$761.25 just for the gas. Then add at least two, maybe three, nights at a motel each way and you can add another \$280 - \$420 and you are up to \$1041, then add at least two meals a day for another \$80 and the total is \$1121. Then of course there are some tolls to deal with, snacks, wear and tear on your tires and vehicle in general. Are you going to blow 4 - 6 days of your two week vacation dragging a drift boat all over the west and then back to PA too?

Maybe some guys think saving a couple hundred is worth it but when you look at all the money and time you are going to have to spend you might agree that \$1200 that the seller charges is a deal.

BTW when I bought my 1998 Hyde in October 1999 I paid \$500 for freight and the driver gave me one of those big hunking anchors with the 1" diameter rods welded onto it and a 20# pyramid anchor. Hydies rule!
