Fish: Do you believe the Brandywine to be a small stream? If what you say is true the only place the fish could go would be where the Brandywine empties into the Delaware outside of Wilmington. I do not feel as if the Brandywine is a small stream especialy when the east and west branch meet.

Numb,

Welcome to the PAff forums.

Smallmouth bass in small streams are transient populations. They migrate downstream into bigger rivers. In my experience, this usually happens around first frost. They'll be back next summer.
