Ya Jeff, I think you may have interpreted Senders message a little off. I agree that if there is a major spill in that area, the DEP, DCNR, PAFBC, etc or a private firm hired by the state should do a solid macro study. This should be funded by the offending party.

Having read the story, there is no way that SAIC should have been used for testing. Seriously? Chesapeake and SAIC share board members! What a conflict of interest.

The article itself is so skewed that it should be labeled as an editorial. Quite the liberal use of quotation marks in a very condescending way.

There should be fines imposed for the event. Costs of neutral studies should be paid for by Chesapeake. Having said that, I really doubt they are going to find anything given the intense and heavy rains which basically diluted everything.
