I have read that mouths of smaller tributaries are good. .

Lots of wisdom here. 😊

In my experience, river muskies don't go dormant in winter although during long periods of very cold water they can be somewhat inactive. As soon as a warming trend happens, they often turn on. Nevertheless, I've had river muskies hit lures aggressively when slack areas were iced over. Fish slower and lower in deeper areas with little current. Deep, slow, shoreline eddies with woody debris are worth checking out.
