There are so many kinds of sunglasses on the market today, they range anywhere from the \$5 glasses at the dollar store to \$1,000 glasses at eye centers with no prescription. What does polarization actually do? i know it helps cut down on the glare. but are some better than others. (Cabelas vs. Wal-mart) i own a pile of glasses i loose them over the winter and everytime i go for my license i end up getting glasses and one of those plastic holder things. then i find them through out the year. i have one pair of glasses that i spent more than 10 bucks on there poloroized but i don't where them fishing.
