Way back when, I owned 2 Fenwick Feralite fiberglass rods. One of them was the FF60 6 footer. One day in January or February I drove to State College to fish Fisherman's Paradise. It was 22 degrees when we drove through State College, but it warmed up to about 38 degrees in the afternoon. I caught a lot of fish on midges that day with the Fenwick. So many fish, that other fisherman were asking "what are you using?". When I told them midges, they said "what the heck are midges?" Not many people used them or knew what they were at that time. Wish I still owned that rod.
