Prescription sunglasses or contacts?

I suspect the vast majority of you like to fish with polarized lenses most of the time. I would think that the majority of my fellow posters here on the board no longer have 20-20 vision. So, what do you do and why?

- 1) Contacts and regular polarized glasses.
- 2) Prescription glasses and polarized over-glasses.
- 3) Prescription polarized lenses.

I've been using contacts and polarized sunglasses, but I'm considering getting some prescription polarized lenses. Any suggestions for where to get prescription polarized lenses?
