Just looking for a best guess ID on this guy. Picture was taken in mid November on a Lebanon County freestone stream. They're about a size 16-18 or so. There's quite a bit of them on the stream in question and I generally fish a size 16 or 18 Red Quill if fish are rising to them...would just like to know what it actually is.

Good idea for an additional forum by the way...I plan to learn a lot here.
