It;s a good book - great photos. One problem I have with many of these books recently is: they pretty much all just take ideas that have been beat into the ground and change wording. Come on - "suspension device"... hasn't it just always been an indicator?? Kudos though to guys like him - they make it work and make a buck -that's really what it is all about. I think him and others would sell their favorite fishing spot for a price....

I took a different take on it. I agree it is an indicator but unless I'm missing his point, I believe he is just trying to separate the tight lining indicator which I think he calls a "sighter" from the floating indicator which to his purpose acts to suspends the fly at a certain depth. I have been nymphing fo years and most of this is nothing new but I think he approaches from a different angle. I certainly learned something.
