Actually in Berks County and much of the SE PA region there are at least 2 different early stones that hatch, both are very dark one is skinny and a #18 to 20 and the other is a #12 to 14 it has a much heavier body. The small ones hatch from Feb 1 to around the middle of the month the other from March 1 to April. I see another small black stonefly, it could even be the same one, that hatches sporadically all year, near home.
