Species: Nigronia fasciata

Family: Corydalidae

Subfamily: Chauliodinae

Length: typically about 22-28 mm

Range

Eastern North America. N. serricoris is widespread. N. fasciatus is widespread, but absent from the upper Midwest and southern Canada.

Habitat

Streams and nearby vegetation. N. fasciatus is restricted more to small streams with very good water quality (1).

Season

Spring--May at lower elevations in North Carolina, May-July at higher elevations
