ok, so I'm new to the whole HD video thing. I received a Nikon AW100 for christmas (thank you fan!) and now that I have had it out a couple times to film fishing trips I have to ask: when it comes to SD cards, what is good enough?

I currently have a 16g 30MB/s sandisk ultra SDHC class 6 card and it shoots great.

this brings me to my question, will bumping up to a 32g 45MB/s class 10 really improve video quality?

the only reason I ask is because recently I was on a relatively short outing where I filled my card very quickly. This got me thinking that it might not be a bad idea to have another card for really long outings. If I pick up another card I thought it might be worth bumping up to a higher class and capacity.

what do you guys think?
