I have a Kindle Fire, but I have not bought any books on there that were more than just novels.

If I wanted to read or reference a book with heavy graphics and images I would lean towards just buying a hardcopy.

The Kindle Fire has a color display, but the way it formats the pages to fit the screen might be a pain the a\$\$ if you to look at larger books that are heavy with images.

Does anyone know if there is a way to share books between users?
