It dissolves in water. Most water goes underground. Rocks and soil "filter" it, and slowly but surely, that "filter" is getting clogged with salt.

I'm sure there's some runoff, but much of it is a groundwater problem.

The bad thing is I'm not sure what you can do about it. The alternatives are still salts. And I would never oppose salting of roads, that'd be sacrificing people's lives so that my fishing can stay good, which doesn't seem right.
