Bob,

So is that NOT a stonefly? Or is the Snofly just another name for it because of the time of year.....

I am working along the Little Conowago and have been for weeks and am seeing not only the #18 EB stones but the other day had a bunch of these on my fabric. All with egg mass on their behinds. Must have thought it was the river.

Anyway, their wings are four in number and much longer than their body.

The Winter black stoneflies are often called "snowflies."

Here is a list I found of snowflies/stoneflies and their scientific name:
