Just a basic tip that I even forget about sometimes myself. Get to the creek, stream, river, get in the water you want to fish, tie your fly on, then Wait.....about 10 minutes or so, and observe. This will give the fish, if spooked, a chance to settle, and will give you the opportunity to observe some important factors, what they're feeding on, where they're feeding, etc... Simple, but effective. Just a reminder to help you out. Tight lines!
