Here is an example of my rig I have been using and tinkering with for some time.

3 feet 20lb maxima or Stren

blood knotted to 15lb Red Amnesia (12")

blood knotted to 8 lb gold stren (12 ")

tippet ring - 2 feet 4X flurocarbon

surgeons knot 2 to 3 feet of 5X flurocarbon

I tie a heavier anchor fly at the point - midge larva or something small and light here off the hook bend of point fly

At my surgeons knot above the point fly, I leave a 5 to 6 inch tag and tie on a softhackle or emerger type fly or even an egg would be good here.

The tippet can be adjusted for length depending on the water level but 4 to 6 feet seems to be appropriate in most situations in PA and NY.
