None of my fish listed above were caught on anything below a size 18.

Most of them were on 16 and 18 Hare's Ear nymphs. A few on PT's and a few on olive dries.

I think the biggest difference is not in skill or tactics, but WHEN. I pretty much avoid it when it's low and clear. I know its tough, so why beat your head against a wall? Go somewhere that fishes better in those conditions!

After we get a nice gully washer, that's when my mind turns to VC. It drops quick, so be there before you think you should after a rain, you want it up and stained. The 18 fish day was about 8 hrs past flood stage...
