I purchased the App for the iPhone. I took advantage of the sale this week. It is a nice app for locating trout streams in Pa. It tells you which streams are speacial regs and normal stocked streams etc. It will give you a stream listed closest to your present position or closest to a town you insert. Then you start exploring which streams you want to visit. You can even tell the app to map your route for driving directions to a stream. It saves from having paper maps to read through.

You can save your favorite streams that are listed in the app but this app could be improved by adding the ability to drop pins at your own locations and add your own information. Maybe this feature is in the app but I couldn't find it. It would be nice if future apps had a log feature and picture feature like MotionX GPS app.

As an FYI - I have a free app I downloaded which is pretty nice called "The Hatch" It's a hatch chart app. it doesn't have many rivers in Pa but the information is pretty usefull to help identify which insects you are seeing on the stream and which fly to use.
