A couple of days prior to a couple of days after the full moon I think is the best time to be on the water after musky. The best time of day is last couple of hours of daylight & a couple hrs after dark. The muskys get on the move in the dark. They push to the edges and its easier for them to hunt with a full moon. The "Hunters Moon" I heard it called 1 time on Joe Bucher outdoors. I got my best fish last summer, a mid fortys musky on the night of a full moon.
