What size do you all tie your Grannoms (the dark variety)?

Some books say size 12. I think that is WAY too big.

The size does seem to vary somewhat from place to place. And I've tied and fished them in both 14s and 16s.

But I'm beginning to lean more towards the 16s. I think it's closer the actual size of the bugs, and I've had better success with the 16s, especially on streams with a lot of fishing pressure.
