Has anyone ever heard of an insect referred to as a "Fish Fly"?

I'm planning a trip out to Penn's Creek for the first time in Mid-May and I noticed that on the hatch chart at [Penns Creek Angler](#) they refer to a Fish Fly. Apparently this thing is massive - sz 4-8. But I can't seem to find any info about it and this is the only hatch chart I have seen that lists it.

I also realize that we might not even see it while we're out there since the hatches are about a month ahead of schedule but I am really curious what this thing looks like and what patterns are used to imitate it.
