CC was out on Saucon Creek for a few hours the other day. Flow for having very little rain was very good although the water was very clear. Managed to have a nice section to myself and got into a decent caddis hatch. Fished primarily a caddis emerger and size 16 wetfly to pretty good success. Managed 18 fish to 16" in 2 hours. With low flows the float fishing on the lehigh and delaware has been very limited. Hoping things turn around soon so we can start posting some videos! Take advantage of this low water to wade the lehigh and the delaware you don't get it often.....
