Porous pavement sounds great but how many winters will it last. I will admit that I know very little about it but I would think that one good freeze-thaw-freeze would be enough to break it up.

Eventually the park will replace most of its impervious surfaces with porous asphalt and concrete. The pores in the pavement will allow additional runoff to be absorbed into the ground and recharge the ground water. The walkways around the park will be laid with porous concrete costing \$28,500. The half-mile trail and 105 space parking lot will replace the original asphalt with porous asphalt costing \$55,250.

Done already near Lititz Run. This is going to be very good for that little stream. It will last a long time.
