This project was very difficult to fund/contract and has been in the works for a year in fits and starts. The eventual project did not use porous pavement for the entire lot. The main center section is conventional surfacing but the two side car parking sections are porous. We'll see how the porous sections hold up. The main concern, of course, is storm water runoff. In the near future, we will continue to construct habitat improvement in the Run itself as part of an eight phase improvement project.
