Fished a Berks county stream today. For the first time I ran into a "sulphur" that I can't say I have ever seen before. It was a size 12-14 had two tails, bright Orange body, yellow wings and on the front edges there was barring or black spots. It also had two small wings behind the main wings. I took some blurry pictures on my dying cell phone. I can't get them up at this minute, but if you guys have no clue I will get them up ASAP.
