I talk to anglers every day, and many have no knowledge of the didymo problem. Some don't even seem to care about what's happening, or just blame it on mother nature, and they aren't willing to do anything at all to help prevent the spread of evasives.

This is why a ban IMO is not a bad idea. Awareness to those that are ignorant to the problem and may help curb those that seem not to care.

I hope this junk never reaches the CV limestoners. They have enough junk in the water already 😊
