But none of us are benefiting by get low priced fuel for our homes, a promise of the industry. And none of us are employed in the gas industry, another promise of the industry. And we certainly don't all have leases and are not getting rich, plus most if not all of the gas is sold on the open market at the highest price bid, and is being exported to other countries. Where is the benefit to citizens of the Commonwealth?

Our forests are being torn up, there are more road in wild areas when the roads should be restored to natural woodlands, and our streams are at a very high risk, from being de-watered and polluted.

Where is the benefit to citizens of the Commonwealth?

And who pays for the mess you leave behind? At the very least you should be paying a severence fee that will pay for the clean-up, restore the pad sites when you leave, oh what's that you're not leaving because there's more gas even deeper? These are all questions that have to be answered before more wells are drilled.

Looks comparatively cheaper to me.
