I just bought 250 screws for dirt bike ice racing tires. With the shipping they cost \$30. I measured the thickness of the soles of my boots and bought the 5/8" length. The heads are 3x taller than a sheet metal screw and much harder. Just screwed them in with the cordless drill. I'm set for another 7 or 8 years with screws. I also screwed them in next to existing studs in my Orvis boots and they work much better.
