After a bunch of trys and ties...this is, I guess, an approximation of what was intended...LaFontaine describes it as fast and simple to tie...I guess it is if you've tied a thousand. This is a clump of hair tied at the butts as close to the eye as I could *without* spinning it,

hair tied with thread carefully to the shank for segmentation,

wrap the thread forward again, then pull the hair forward and tie again with pinch wraps, careful not to spin it too much,

pull the tips back and tie down just a little for the wings...

Deer hair, thread and hook. With practice, I think I could tie them pretty small...This is on a 16.

Thanks for all the input guys! (Even D_D and HeritAGED Angler)

Think that's it?
