I would think that there have to be Hex's on the lowest section of the Yough. I've seen them on the gas pumps at the station near my house, so they're in the Mon and the Yough joins the Mon not far from there. Maybe the water is too cold for them as you get closer to Confluence. I stopped at Ohiopyle tonight and walked a mile or so on the trail. I saw 2, literally, 2 cahills come off. That was it. Nothing rising. A reliable hatch of big bugs would be great there.
