Checking in again from Ohiopyle.. There is NO bloom below the falls. That information is patently false, end of story. I agree we have to treat the entire river as if it is contaminated. However reports that it is bank to bank, Blooming, and at the outflow, are just wrong. Dale K, who is quoted in the article is a friend and employee, he is distraught over the use of the quote where it was in that article. As usual an out of context quote that is following absolutely incorrect information and being restated by those without any first hand knowledge.
