Thanks for the update Scotto. The Quitty has always had a special place in my heart because it's where I think I really got the hang of this whole fly fishing thing. I helped DFTU and the watershed association with some of the earlier stream improvements including the big mud sill at the upper end of the DHALO stretch. Hope the project can get done. That stream has a lot of potential imo.

I would think the archaeological survey will mostly turn up a lot of trash that has washed down from the city of Lebanon over the years. Should be some interesting finds. LOL
