JF,

I'm a bit unsure on this.

As I mentioned in one of the water temp threads, I'm convinced that SMBs like warm water. In my experience, summer bass action is best in temps of about 75-85 degrees. My (limited) experience with warmer water has suggested to me that about 86-88 degrees is the upper limit and that temps warmer than this seem to inhibit SMB activity. I rarely fish temps warmer than this so am not convinced yet.

We need to do more research. 😊
