Today, CVTU volunteers completed another section in a multi- phase habitat improvement project in The Run in Boiling Springs. If you've been following related topics, you'll recall some discussion here on PAFF regarding the parking lot project. The parking lot was finished some weeks ago. In the pic below, you can faintly see the line separating the permeable pavement under the car parking spots from the conventional pavement down the center lane.

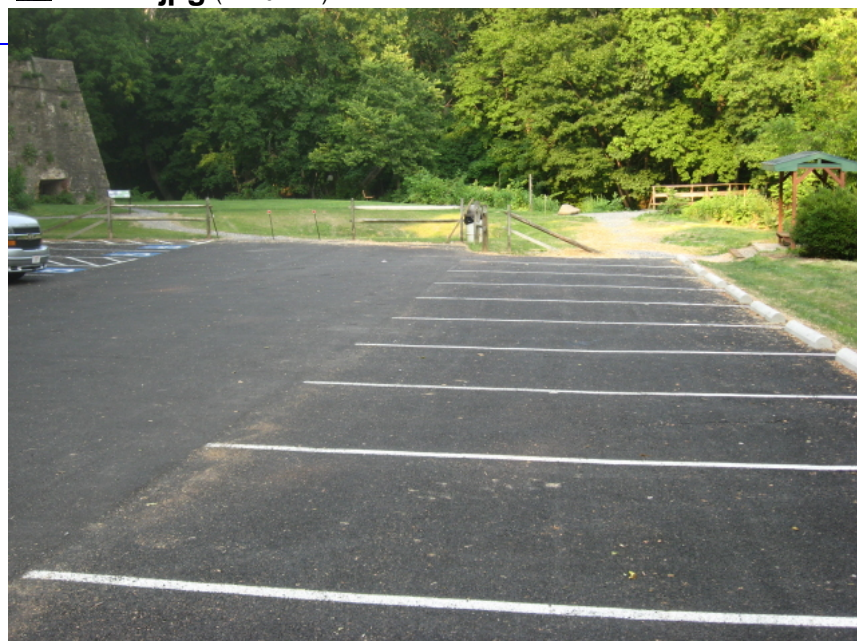

The next pics depict the log vane deflector under construction and completed today. This was about 25 yards downstream from the AT footbridge and turned a fairly flat, featureless pool with a depth of about a foot, into a much deeper section with a nice plunge pool and better flow/oxygenation. Within minutes after we completed this, I saw a couple nice trout move up under the logs.

Thanks are due to the Bureau of Forestry for donating the logs and Pennsy Supply for the shot rock. Also: PFBC, Shane Gilbert, and (as always) Gleim Environmental for their time and help. It's much appreciated.

Dave W
