My nymph rig is usually a 9 foot leader with a 3x fluorocarbon tippet and a sucker spawn as my top fly and an 18" piece of 3x fluorocarbon tied off of the bend and a stonefly at the end. Preferably a weighted stonefly nymph. I add weight above the Suckerspawn to get the flies to bounce or roll on the bottom. You want a dead drift.

Shock

Only 1 fly allowed in SR. Just an FYI.
