Ok, I was wrong. :) Sorry.

Good info Ingleby. 60/400 being over 14" is very impressive. I realize your numbers/distances are guestimates, and it's only a part of the sampling at that. So I'm taking this way too far. But anyways:

400 fish/300 yards = 2352 fish/mile. Would actually be the lowest total of the now 6 surveys which were taken since the TT went into effect.

60 legal fish/300 yards = 352 legal fish/mile. That's slightly lower than the 05 survey, but considerably higher than 97, 99, 01, and 07 surveys. By %, it's the highest % of total fish being legal size.
