Just what we need more invasive fish where they could be creating fisheries that hold large brook trout. A couple already hold them.

Many of the Maine Rivers and Stream get too warm for summer fishing for trout, or at least early morning and late evening fishing at best. There are places where the smallie fishing is good in Maine, but I wouldn't go there to fish for smallies in Maine. That's not why I go there.

Msallies have been introduced by bucket biologists all over Maine, and there's no getting rid of them, they are a threat to the trout and salmon.
