“An investment in Pennsylvania’s natural resources is a proven investment in local economic activity,” said Corbett. “Investments that create jobs, help communities prosper and preserve our natural resources are always worthwhile.”

What kind of investment is he referring to here government money or private? What kind of natural resources is he "investing" in, ones that promote outdoor leisure activity or coal and oil extraction? Is it logical that by investing and creating jobs you are preserving natural resources?

As troutbert said total attempt at greenwashing.
