Pat. Be careful floating the entire way to Betts with low flows. If the wind is wrong it could make for a miserable day. We usually float to Betts with the DB but only when we have the motor. I'd suggest talking with the canoe rental place at the top end of town. You could easily yank a raft out there and it would cut off the last 2 miles of fairly unproductive water. Any questions, shoot Pete or I an email and we can connect. Check our site for a short video clip from a recent allegheny float, including a surprise Muskie on the fly! Best of luck.
