normal for Asaph and Canada to be dry all summer at the bottom. should have stopped by would have sent ya to a small stream that's producing some nice size brookies.. A lot of the smaller tribs run dry at the bottom during the summer. just remember only 10% of streams are on the surface. asaph comes out in marsh under ground and there's lots of fish. did ya stop on the bridge over marsh there's a 25" brown in there..
