I was fishing the East Branch of the Perk this morning for stockies but, figured why not. Didn't catch much other than panfish but, I did see a fee yellow jackets in the water. I guess because the rain was off and on they got caught out and couldn't fly away.

I almost wanted to follow one down the creek to see if it would get taken. It got me thinking - I guess the stinger doesn't effect the fish? I was fishing a beetle for awhile with no luck than switched to an ant with an olive, bead head nymph below. Once I switched the panfish were all over it but, I was after the stockies. Still fun though.
