I was there last Sunday, 10/14 in the C&R section. Water is VERY low. The stream could really use some rain. Many spots I would have normally fished were so low they weren't worth focusing on. Leaves were not a problem but that could change by this weekend. Certainly if any rain brings the water up it is going to put a lot of leaves in the stream. Caught fish on small nymphs and a few on top with a cdc caddis.
