If you're buying new 50 or 100 M rolls of tippet that means you've blown though your last roll. Where did it all go?

I hope it didn't end up in the water (lasts over 600 years!). If you stuff the waste in your pocket but are fed up with dedicating a pocket to the waste or you notice its hard to poke it in without it falling out into the water try this out - www.grasshopperproducts.com.

A good alternative and keeps the waste mono secure 'til you get to a trash can.

Blaze.
