If you have a family member looking for a good gift for you, please ask for the GPS Fishing Guide. You'll be ready to get out on the water in style.

The 2013 EDITION for iPhone, Android, and Garmin is in the works. This year the price is much lower and we will be incorporating many of the features PAFlyFish.com members have requested.

As a PA trout angler who uses the Guide, I'm very excited about the new features planned for 2013.

I'll be posting updates on development as it progresses. I just completed the addition of stream section numbers so will be able to search for destinations on a specific stream section. A great feature when you want to target your day's fishing based on the PFBC stocking list.

NOTE - The features mentioned in my messages will not be available until the updates are released so when I say I've finished something, it still isn't available on the market. It just means the work on my end is done.
