Those two streams are two of the four or five C & R FFO areas in which fing stockings have replaced adult stockings through 2015 as an experiment in the success or failure of such stockings. All except Donegal are being stocked with browns. All fish are fin clipped for easy ID.

According to the PFBC website the following C&R FFO areas will get fingerling stockings (if I read it right):

Little Sandy Creek, Caldwell Cr, Donegal Cr, White Deer Cr, Green Spring Cr.

Does this mean that fingerling stocking will replace adult stockings on all these? Or will some of these streams continue to be stocked with adult trout, as well as with fingerlings?
