Yep - not only do they taste good, they hit flies and lures and fight hard. More and more anglers in the tidal Potomac are really starting to like snakeheads. As the article says, however, the name "snakehead" won't result in a lot of menu orders.

Recall some years ago that seafood promoters had a delicious (although slow growing and now rare) fish from the Atlantic that tasted so good it had great promise as a restaurant delicacy....the only problem being its unappetizing name: Patagonian toothfish.

Well, once the promoters changed the name to "Chilean Sea Bass" the newest food fad was off to the races.

So what more appetizing name can we come up with for the snakehead? 😊
